

Less paperwork, more patients: The digital shift.

Kyocera's comprehensive solutions empower digital transformation in healthcare, helping you reach new heights of data security, operational efficiency, sustainability and patient care.

Data Security

Data protection and compliance in the modern digital age are more pressing than ever.

Kyocera helps healthcare institutions digitise documents and store them in the cloud.

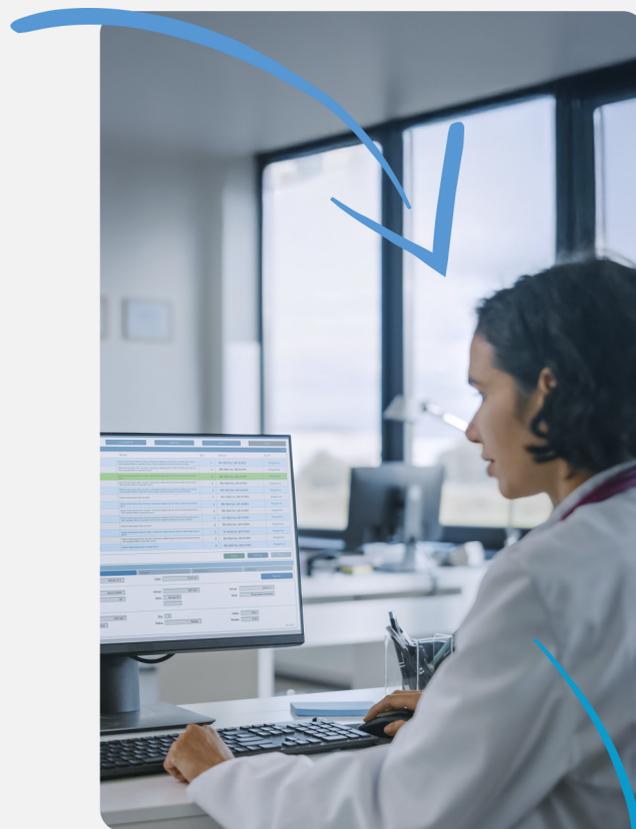

This safeguards private data with encryption, strict access permissions, and user authentication.

Sustainability

Pressure is mounting for large institutions to meet sustainability goals and reduce their carbon footprint.

Our hardware is designed to use less energy and minimise waste, while our software helps companies reduce paper usage, minimising environmental impact.

Kyocera's sustainable solutions help organisations meet eco goals while maintaining efficiency, productivity, and reliability.

Workflow efficiency

Paper workflows are time-consuming, leave room for human error, and limit accessibility to vital information.

Digitised and automated workflows provide quicker access to more up-to-date information.

This allows medics to make on-the-spot, well-informed decisions, improving patient care.

Cost Management

The costs of an unmanaged print fleet, consumables, on-site document storage servers, and energy-inefficient devices add up.

Kyocera's remote fleet maintenance solutions provide reports to help companies reduce print expenses, while cloud-based document storage eliminates the costs of on-site maintenance.

When healthcare companies spend less on administrative tasks, they can reallocate resources for more pressing business, such as patient care.

Work with Kyocera

Kyocera is your trusted partner in healthcare workflows. We provide the tools and support you need to streamline vital processes and enhance patient care. Putting our extensive knowledge to work in the healthcare sector, we meet your needs in security, efficiency, sustainability, and cost management.
